French government to use PostgreSQL and LibreOffice in free software adoption push

The plan could see up to 10 percent of money saved on proprietary software licenses reinvested in improving free software

By Peter Sayer | IDG News Service | Published 16:05, 25 September 12

0 6 0 0 78

French government agencies could become more active participants in free software projects, under an action plan sent by Prime Minister Jean-Marc Ayrault in a letter to ministers, while software giants Microsoft and Oracle might lose out as the government pushes free software such as [LibreOffice](#) or PostgreSQL in some areas.

US Government Agencies Turn to EnterpriseDB and Postgres to Slash Database Costs by 80%

Release Date:

Jul 23, 2013

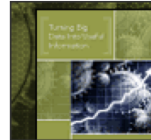

The DoD, FAA and NASA are among the agencies that have adopted Postgres, meeting open source objectives while reducing costs

Bedford, MA – July 23, 2013 – Shrinking budgets and ongoing battles in Congress have prompted US government agencies to turn increasingly to open source database options like Postgres, many with the help of [EnterpriseDB](#), to slash database costs by as much as 80 percent, the company announced today. EnterpriseDB, the leading worldwide provider of enterprise-class PostgreSQL products and Oracle database compatibility solutions, now works with more than 40 federal agencies with deployments of Postgres and EnterpriseDB products.

Federal agencies using Postgres include the Federal Aviation Administration (FAA), the National Aeronautics and Space Administration (NASA), the Department of Labor and multiple agencies throughout the Department of Defense (DoD). The number of government agencies among the more than 2,000 organizations in EnterpriseDB's customer base rose by 40% over the past year as chronic battles in Congress signaled that belt-tightening and deep cost cutting would become a long-term reality.

"EnterpriseDB slashes costs and reduces the risks inherent in migrating to a new database, and our government customers need our partnership to ensure success," said Ed Boyajian, CEO of EnterpriseDB. "In this time of fiscal budget crisis, government IT leaders are becoming heroes by moving from costly commercial databases to lower cost open source options without sacrificing on performance requirements. It just makes good sense for everyone."

EnterpriseDB announced that U.S. government agencies are moving to Postgres to cut costs as federal budgets tighten.

EnterpriseDB, a provider of enterprise-class [PostgreSQL](#) products and Oracle database compatibility solutions, announced that several federal government agencies are turning away from commercial database vendors to EnterpriseDB to cut their database costs.

Indeed, the company said shrinking budgets and ongoing battles in Congress have prompted U.S. government agencies to turn increasingly to open-source database options like Postgres, many with the help of [EnterpriseDB](#), to slash database costs by as much as 80 percent. EnterpriseDB now works with more than 40 federal agencies with deployments of Postgres and EnterpriseDB products.

The company made its announcement in conjunction with the [O'Reilly Open Source Convention \(OSCON\)](#).

Federal agencies using Postgres include the Federal Aviation Administration (FAA), the National Aeronautics and Space Administration (NASA), the Department of Labor and multiple agencies throughout the Department of Defense (DOD). The number of government agencies among the more than 2,000 organizations in EnterpriseDB's customer base rose by 40 percent over the past year as budget battles in Congress signaled that belt-tightening and deep cost cutting could become a long-term reality.

Oxford University Computing Services (OUCS), which provides services to staff and students around the university, will complete its move to open-source PostgreSQL as the back-end database for most of its systems over the next year.

Ray Miller, the systems development and support manager at OUCS, told ZDNet UK that the OUCS has been using PostgreSQL since 1998 and has at least eight PostgreSQL databases. At present it is running PostgreSQL 7.2 on Debian, the free Linux distribution. The OUCS uses Ingres as the back-end of a user registration system, but is due to migrate this to PostgreSQL in the next 12 to 18 months, said Miller.
